EDUCATION

Northeastern University, Boston, MA

September 2021-May 2025

Khoury College of Computer Sciences

GPA: 3.85

Bachelors of Science in Data Science, Minor in Mathematics

- **Relevant Coursework:** Machine Learning 1 & 2, Large-Scale Storage & Retrieval, Linear Algebra, Probability & Statistics, Natural Language Processing
- **Extracurriculars:** Survivor Northeastern, Husky Hunt

SKILLS

Languages: Python | SQL | R | C++ | HTML | CSS

Tools/Libraries: Flask | Slack API | Vertex AI | Pandas | NumPy | Scikit-Learn | Seaborn | Terraform | Docker

Software: GitHub | VS Code | Jupyter Notebook | Tableau | Spotfire | Google BigQuery (GBQ) | GraphQL

WORK EXPERIENCE

Wayfair LLC, Boston, MA

July 2024 – Dec. 2024

Software Engineer Co-op

- Developed a Slack chatbot using Python, Slack API, and Gemini's Vertex AI to automate responses to warehouse employee queries, significantly reducing ServiceNow ticket volume
- Implemented a RAG-based model for the chatbot by leveraging Terraform to create databases for storing and querying historical ServiceNow ticket data
- Create large-scale SQL queries to pull data from Google BigQuery databases

Solid Biosciences, Charlestown, MA

July 2023 – June 2024

Data Analyst Co-op

- Engineered Python programs to data scrape lab documents and automate the creation and updating of excel sheets and visualizations
- Developed a software to overlay chromatogram diagrams from exported excel files
- Participated in clarification lab experiments to create comprehensive visualizations and analysis of results using Python and Spotfire

School of Journalism at Northeastern University, Boston, MA

Sept. 2021 – June 2023

Office Assistant

- Track usage of podcast studio, mailroom, and student IDs through excel spreadsheets
- Help with general front desk duties such as answering phone calls and scanning documents

PROJECTS

Electricity LMP Predictions

April 2025

- Collected and processed real-time electricity market data from GridStatus.io to model Locational Marginal Pricing (LMP) using Python and R.
- Built and evaluated predictive models including Convolutional Neural Networks (CNNs) in Python and AutoRegressive time series models in R to forecast next-megawatt electricity prices.

Presidential Speech Prediction

May 2024

- Developed and evaluated neural network models (LSTM, Transformer, and Feed-forward) to classify U.S. presidential speeches, achieving over 50% accuracy using a dataset of 1,000+ speeches.
- Implemented NLP techniques, including Word2Vec embeddings and n-gram tokenization, to preprocess data and trained models with TensorFlow and Keras, leveraging over 3.5 million training examples.
